Rapid Check In Capability
Bulk Check In Items Quickly

User Definable Data Fields
Specify data you want to track

The My Storeroom software manages the locations of your items. The software is simple to use and features powerful reporting to track of all of your equipment.

The My Storeroom software was designed with help from our customers. There are two versions that you can choose from (Standard & Professional).

We make it as simple as possible. Most of the software screens are step-based and offer help screens. A Quick Start screen details how to set up your software for the first time. A powerful import utility allows you to load your existing data.

The Check In and Check Out screens are simple to use. Select a borrower, select a storeroom and then start barcode scanning Items.

Extracting data from My Storeroom is also simple. A powerful set of prepackaged reports provides different views of your data. An export screen allows you to extract the data you want in the order you want it.

Attach information to your items with user definable fields. You can also attach an image, cost and job number to Items.

There is a rapid check in capability for busy storerooms. The software also has an unattended mode where users can check items in and out with out a storeman.

Features	Standard	Professional
Check Items In and Out	✓	✓
Assign Due Dates	✓	✓
Track Items By Borrower and Location	✓	✓
